IIC3585-1

# Web Assembly y PWA {

<Grupo 3>

}

# DEMO

### Componentes

01 Web Assembly

02 PWA

03 Service Worker

04 Push Notifications

Emscripten

```
#include <stdio.h>
    #include <stdint.h>
    #include <stdlib.h>
    #include <string.h>
    #include <emscripten.h>
6
    typedef struct {
        uint8_t r, g, b;
8
    } RGB;
```

Funciones de entrada/salida
Definir tipos con tamaños
Manejo de memoria
Manipulación de strings

```
#include <stdio.h>
    #include <stdint.h>
    #include <stdlib.h>
    #include <string.iii
    #include <emscripten.h>
6
    typedef struct {
        uint8_t r, g, b;
8
    } RGB;
```

Permite exportar funciones y trabajar con el entorno WASM

```
01Difuminar03Oscurecer02Aclarar04Resaltar bordes
```

```
EMSCRIPTEN_KEEPALIVE
void apply_blur(RGB *image, int width, int height) {
```

En main.js importamos el módulo de WASM llamando a filters.js

Podemos acceder a las funciones de C exportadas usando Module.cwrap()

```
> public > {} manifest.json > ...
   "name": "Editor de Imágenes WASM",
    "short_name": "ImgWASM",
    "start_url": "./",
    "display": "standalone",
   "background_color": "#ffffff",
   "theme_color": "#0f172a",
    "icons": [
        "src": "/icon-192x192.png",
       "type": "image/png",
        "sizes": "192x192"
      },
        "src": "/icon-512x512.png",
        "type": "image/png",
        "sizes": "512x512"
```

#### Manifiesto

Se define la información escencial de la PWA en maniest.json

```
import { defineConfig } from 'vite'
import { VitePWA } from 'vite-plugin-pwa'
export default defineConfig({
  plugins: [
   VitePWA({
      registerType: 'autoUpdate',
     //Usamos nuestro propio SW
      strategies: 'injectManifest',
     // La carpeta donde vive el SW:
      srcDir: 'src/pwa',
     // y el nombre final:
     filename: 'service-worker.js',
      injectManifest: {
        swSrc: 'service-worker.js'
     manifest: {
        name: 'Editor de Imágenes WASM',
        short name: 'ImgEditor',
        start_url: '/',
        display: 'standalone',
        background_color: '#ffffff',
        theme_color: '#0f172a',
        icons: [
```

# Complemento Vite PWA

Se importa VitePWA

Definimos el uso de nuestro

propio Service Worker

Llamamos el manifiesto

### Service Worker

VitePWA + Workbox

#### Estrategia Cache First

```
import { precacheAndRoute } from 'workbox-precaching';
precacheAndRoute(self.__WB_MANIFEST);
```

Evento install ----- Precacheo -----

Funcionamiento

offline

```
workbox: {
    globPatterns: ['**/*.{js,css,html,png,svg,wasm}'],
    runtimeCaching: []
},
```

#### Peticiónes al Backend

```
// ▼ Network only para las peticiones de la API
self.addEventListener('fetch', event => {
    // No hace nada para peticiones fetch, evita errores con POST/PUT
});
```

### Push Notifications

#### Push Service

#### cliente

```
window.addEventListener("load", async () => {
  if ("Notification" in window) {
   if (Notification.permission !== "granted") {
      const permission = await Notification.requestPermission();
     if (permission !== "granted") return;
    console.log(" V Notificaciones activadas automáticamente");
    await subscribeUserToPush();
});
```

cliente

#### cliente

```
export async function subscribeUserToPush() {
 try {
    const registration = await navigator.serviceWorker.ready;
    const subscription = await registration.pushManager.subscribe({
     userVisibleOnly: true,
      applicationServerKey: urlBase64ToUint8Array(publicKey),
   });
    console.log('Suscripción exitosa:', JSON.stringify(subscription));
    const response = await saveSubscription(subscription);
  } catch (err) {
    console.error('Error al suscribirse: ', err);
```

Message

#### servidor

```
app.get("/send-notification", (req, res) => {
    const payload = {
        title: " Recordatorio",
        body: "Acuérdate de modificar tus imágenes antes de publicarlas",
        icon: "/icon-192x192.png",
        badge: "/icon-192x192.png"
    };
    enviarNotificacion(payload, res, "recordatorio");
});
```

```
try {
   await webpush.sendNotification(suscriptor, JSON.stringify(payload));
```

#### service-worker.js

```
self.addEventListener('push', event => {
  console.log('[SW] Push recibido');
  const data = event.data ? event.data.json() : {
   title: "🌧 Notificación",
   body: "¡Tienes una nueva notificación push!",
  };
  const options = {
   body: data.body,
   icon: '/icon-192x192.png',
   badge: '/icon-192x192.png'
  };
  event.waitUntil(
   self.registration.showNotification(data.title, options)
  );
});
```

Web-push {

03

04

01 Web Push Protocol

02 Gestión VAPID KEYS

Codifica y cifra los mensajes

Conexion push service del navegador

https://www.npmjs.com/package/web-push

## IndexedDB

#### utils/db.js

```
import { openDB } from 'idb';
export const initDB = async () => {
  return await openDB('imagesDB', 1, {
   upgrade(db) {
     if (!db.objectStoreNames.contains('images')) {
       db.createObjectStore('images', { keyPath: 'id', autoIncrement: true });
 });
};
export const saveImageToDB = async (name, blob) => {
  const db = await initDB();
 await db.add('images', {
    name,
   date: new Date(),
   blob
 });
};
export const getAllImages = async () => {
 const db = await initDB();
 return await db.getAll('images');
};
export const clearImagesFromDB = async () => {
 const db = await initDB();
 const tx = db.transaction('images', 'readwrite');
 await tx.objectStore('images').clear();
 await tx.done;
```

#### main.js

```
import { saveImageToDB, getAllImages, clearImagesFromDB } from './utils/db.js';
```

```
saveBtn.onclick = async () => {
  if (!imageDataWorking) return;
  const exportCanvas = document.createElement("canvas");
  exportCanvas.width = scaledWidth;
  exportCanvas.height = scaledHeight;
  const exportCtx = exportCanvas.getContext("2d");
  exportCtx.putImageData(imageDataWorking, 0, 0);
  exportCanvas.toBlob(async (blob) => {
    if (blob) {
     await saveImageToDB(`imagen-${Date.now()}`, blob);
      showSavedImages();
     showNotification("

Imagen guardada correctamente");
 }, "image/png");
clearBtn.onclick = async () => {
  await clearImagesFromDB();
 showNotification("
    Imágenes eliminadas correctamente");
  showSavedImages();
};
async function showSavedImages() {
  const images = await getAllImages();
  savedList.innerHTML = "";
  images.forEach(item => {
    const url = URL.createObjectURL(item.blob);
    const img = document.createElement("img");
    img.src = url;
    img.alt = item.name;
    savedList.appendChild(img);
  });
```
